

CPX | Playing with Remotes

Connect the Circuit Playground Express to MicroBlocks.

This script turns an IR signal into a sound you can hear.
(Pin 0 is the speaker and pin 11 is the IR receiver.)

Use this script to find the IR code for a button on your remote.

These scripts make the Circuit Playground respond when it receives the codes 192 and 86 from the IR remote.

You can make different buttons follow different commands!
