Connect to the Circuit Playground Express (CPX)
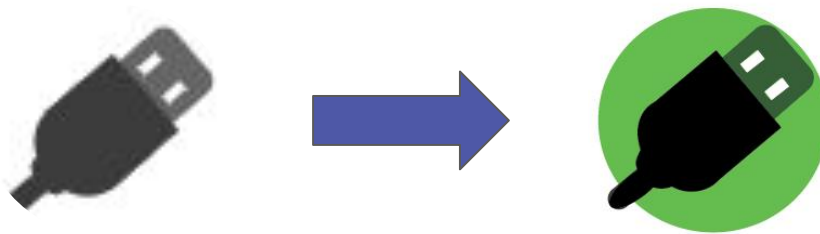

Visit microblocks.fun and download
MicroBlocks for free!

Note: On Macs, you will need to right click on the MicroBlocks app and select Open.

Connect the Circuit Playground Express to a computer with a USB cable
(note: make sure the USB cable is not a *power only* USB).

In the upper left corner of the MicroBlocks window, you will see a
USB icon. When you plug in your CPX, you should see the USB icon
turn green. You are now ready to code!

Click the Neopixel display category along the left side of the MicroBlocks window.

Drag the *set NeoPixels* block into the scripting area and click it to see your CPX light up!
