CPX | IR Remote Control

Connect the Circuit Playground Express to MicroBlocks.

This script turns an IR signal into a sound you can hear.
Pin 0 is the speaker and pin 11 is the IR receiver.

```
when started
forever
    set digital pin (0) to (read digital pin (11) ▶)
```
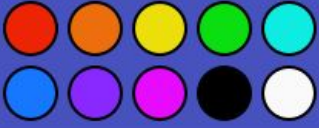

Use this script to find the IR code for a button on your remote.

```
forever
    say (receive IR code ▶)
```

These scripts make the Circuit Playground respond when it receives
the codes 192 and 86 from the IR remote.
You can make different buttons follow different commands!

```
when (192) = (receive IR code)
    set NeoPixels
    [🔴🟠🟡🟢🔵]
    [🔵🟣🟣⚫⚪]
```

```
when (86) = (receive IR code)
    set all NeoPixels color (random color)
```
